

Launch of the Irish NGN

Welcome to the Irish NGN

CIGRE is the world's foremost source of power system expertise since 1921 and the Irish chapter of the CIGRE Next Generation Network was successfully launched on 22nd October 2018 in an event hosted by EIRGRID.

The event was a great success with presentations from Prof. Ogimoto San from University of Tokyo and Hassan Qazi from EIRGRID's innovation team, each leading a lively discussion on the challenges facing the grids of Japan and Ireland as they move toward a greener future.

The **Irish NGN committee** thanks everyone who helped us launch the NGN and we encourage everyone to visit the **Irish National Committee** website to look out for future events and opportunities to get involved in CIGRE.

What is the Next Generation Network?

The Next Generation Network (NGN) aims to bring a new generation of engineers into the world of CIGRE and help deliver a platform where early-career professionals can feel comfortable sharing their ideas, get an opportunity to interact with industry experts and get involved in CIGRE Working Groups and technical events.

Membership in the NGN is open to any CIGRE member under the age of 35. So, the **NGN committee** encourage you to enquire about membership or get in touch if you are interested in hosting an event or information night.

Our Goals

- Engage with all potential young members, especially in universities and small and medium enterprises to make the NGN as inclusive as possible
- Organise high quality events for young members that help them become more familiar with the industry and the exciting changes taking place
- Make Working Groups more accessible to young members
